

Transport

Security Solutions

Airports • Ports • Bus • Coach Terminals • Railway Stations • On-board Applications

Samsung understands that security in a transport environment is a critical requirement. A video surveillance system will therefore be expected to play a major role in assisting security personnel to react quickly and effectively to any incident, regardless of whether there is a need to detect a terrorist attack, deter criminal activity or monitor health & safety compliance.

In transport applications, security products need to be sufficiently robust to withstand adverse weather as well as other harsh operating conditions, such as poor light and high levels of vibration. With this in mind, Samsung has engaged an independent company to evaluate its products before they are launched to ensure they are fit for purpose.

Transport

- Robust on-the-move systems for buses, trucks and trains
- Stand alone or integrated remotely monitored IP solutions
- Wireless communications
- IK-10 compliant and EN-50155 SNV-5010 certified cameras

Product Range and Image Quality

Samsung has developed an extensive range of analogue, hybrid and IP based products to make it easier for you to select the most suitable solution for your video surveillance project, from one provider.

The latest generation of Samsung cameras and dome cameras capture extremely high quality images regardless of the lighting conditions, whilst thermal imaging cameras can detect and capture objects in severe conditions such as; smoke, snow, heavy rain and fog.

Testing and Industry Standards

All the models in Samsung's comprehensive range of vandal resistant analogue and IP cameras and dome cameras have been independently tested to verify that they meet the IK-10 certification requirement.

The vandal resistant dome cameras have been approved for use by the railway industry and operate reliably when subjected to the rigorous conditions that can occur on board trains, such as high levels of vibration.

Samsung has also carried out tests on its external dome cameras to ensure they can withstand exposure to saltwater when they are deployed as part of a port's video surveillance system or are used for another security project located close to the sea.

Video Management Software (VMS)

Samsung provides licence-free recording and viewing software to ensure customers achieve maximum benefit from their investment in a Samsung video surveillance solution. We also work closely with a large number of independent Video Management Software (VMS) companies to provide customers with the option for Samsung products to be controlled and monitored alongside equipment produced by other manufacturers.

Support

Offering 'Best of Class' products and solutions is only one part of the process of delivering Samsung Smart Security. Every one of our products, many of which have been highly rated in independent product tests, is backed by unbeatable pre and post sales support. We can offer your preferred installer a range of support services which includes; training, free system design, free technical support and a full three-year warranty on all products.
